Subject:	RE: Site Potentially Affected - btpropertysearch.com
Attachments:	Site Location Plans.pdf

To whom it may concern,

Please see information provided below (with site plans attached):

1 Site Plan
See attached.

2 Description of proposed development
The UK Holocaust Memorial will incorporate a new national memorial and learning centre. The learning centre will be a construction below ground, comprising a double-level basement.

3 Client/Developer email contact details (not your own)
Client name: UK Holocaust Memorial Foundation (Andy Bramwell - representative)
Client email address: andy.bramwell@cabinetoffice.gov.uk

4 Proposed start on site date
Q3 2019.

Regards,

John Richmond
Associate Director Geotechnical Engineer

19 July 2018

Dear John,

5 Millbank Westminster London SW1P 3JA

Thank you for your communication of 13th July 2018.

I can confirm that London Underground has no assets within 50 metres of your site as shown on the plan you provided.

However we do have cable ducts in the area. Should you or your client intend undertaking highway works at this location, please contact:

NRSWA Enquiries
Power Delivery
London Underground

Tel: 0203 054 8354

LULHVpowerassets@tfl.gov.uk

Your works may also affect Transport for London Road Network. Please contact the following for advice if you are carrying out any highway/utility works:

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

G.L. 450/41

27th November, 1945.

Report on the examination of a sample of borehole water from tap fitted to Berkefeld filter at MAP/O I.C.I.House, Millbank, received on 13th November, 1945, Lab.No.C.W.993.

The results of the examination are as follows:-

Chemical Examination	Parts per 100,000
Ammoniacal nitrogen	0.0092
Albuminoid nitrogen	0.002
Oxygen consumed in 4 hours at 80°F from N/80 Permanganate	0.23
Nitrogen from nitrites	0.0006
Nitrogen from nitrates	absent
Combined chlorine	14.0
Total hardness (as calcium carbonate)	14.1
Alkalinity (as calcium carbonate)	26.3
Lead, iron, and zinc	absent
Reaction (pH value)	(8.1)
Appearance	Slightly opalescent, very slightly yellow (Hazen 5), odourless.
Sediment	Trace, consisting of vegetable matter, together with several small protozoa.

Bacteriological Examination	
Number of organisms per ml. growing on nutrient agar	
a. in 2 days at 37°C.	108
b. in 3 days at 20-22°C.	180
Probable number of coli-aerogenes organisms per 100 ml.	none
Typical Bacterium coli	absent

7. S W. E. F5

The Thames Embankment is being prolonged from the Houses of Parliament to Lambeth Bridge. A series of bores have been made to test ground. This work is under a different engineer to that at the New County Hall. I obtained these 2 bores from the latter official. I think the place should be visited.

Borings sunk in connection with Extension of the Embankment from the Houses of Parliament to Lambeth Bridge

No 4. Road Southside on Telly & near Bridge.

1. Introduction

1.1. Terms of Reference

Atkins Limited (Atkins) has been commissioned by the UK Holocaust Memorial Foundation to undertake a tree survey in accordance with BS5837*:2012 Trees in relation to design, demolition and construction – Recommendations* in support of a design competition for a proposed UK Holocaust Memorial, to be situated in Victoria Tower Gardens, Westminster.

The survey extents included all the trees within the Gardens, and also trees on the west side of the adjoining street (Millbank) as defined by the supplied 'Site Area Plan'.

1.2. The Survey Site

Victoria Tower Gardens are centred at Ordnance Survey national grid reference TQ 302792, and located directly south of the Palace of Westminster, on the west bank of the River Thames where the river flows south to north through the centre of London. Lambeth Bridge crosses the river directly south of the park, while a tree-lined road, Millbank, runs on the west side of the Gardens.

The Gardens are V-shaped, the two long sides being lined with large trees. The central area is mostly grassed. A children's play area and public toilets are located at the southern apex of the Gardens, while a recently constructed Parliamentary Education Centre, opened in 2015, is situated at the northern end of the site. The Gardens contain a number of memorials which loosely share the theme of freedom, a seasonal refreshments kiosk, extensive shrub borders and bench seating.

1.3. Proposed Works

The site is to become the home of the winning design for a UK Holocaust Memorial. An international competition is being held in 2016-17 to select a design, which may feature a below-ground learning centre to accompany the memorial.

This report and the accompanying 'Tree Constraints Plan' (TCP) should be used during the design process to inform the design of the memorial, with particular reference to its relationship with and impact upon the trees in and adjacent to the Gardens.

1.4. Scope of Works

This report presents arboricultural information captured on 30 November, 07 and 15 December 2016 by Atkins' Arboricultural Team Leader Tom Dale M.Arbor.A Cert Arb L6 (ABC) and Landscape and Arboricultural Consultant Adam Atkins, BA (Hons) CMLI TechCert (ArborA). The scope of works includes the preparation of an Arboricultural Impact Assessment and Tree Constraints Plan to support the detailed design process for the site.

2. Methodology

2.1. General

This Arboricultural Impact Assessment has been undertaken in accordance with *BS5837:2012 Trees in relation to design, demolition and construction – Recommendations*. The standard gives recommendations and guidance on the relationship between trees and the design, demolition and construction process, setting out the principles and procedures to be applied to achieve a harmonious and sustainable relationship between trees and structures.

2.2. Spatial Scope

The survey works spanned three visits and concentrated on all trees within the site extents as shown on the supplied topographical survey drawings.

2.3. Data Gathering

Data were collected in accordance with *BS 5837:2012*, as outlined in Appendix A of this report. The purpose of the tree categorisation method applied by the arboriculturist, was to identity the quality and value (in a non-fiscal sense) of the existing tree stock, allowing informed decisions to be made concerning which trees should be removed or retained if development is to occur.

For a tree to qualify under any given category, it should fall within the scope of that category's definition as defined in figure A2 in Appendix A (categories U, A, B, C) and, for trees in categories A to C, it should qualify under one or more of the three sub-categories (1, 2, 3). Sub-categories 1, 2 and 3 are intended to reflect arboricultural, landscape and cultural values, respectively.

Trees were recorded as individual specimens and as groups. Where trees were recorded within groups measurements were taken from the largest tree within the group for the purposes of establishing data for the tree survey drawings. This level of survey meets the requirements of *BS 5837:2012*, which states that *'trees growing as groups or woodland should be identified and assessed as such'*. The BS defines the term group as *'trees that form cohesive arboricultural features either aerodynamically (e.g. trees that provide companion shelter), visually (e.g. avenues or screens) or culturally including for biodiversity (e.g. parkland or wood pasture)'.*

Crown spreads of the surveyed trees were given as an average measurement or to the relevant cardinal points with regards to any future proposals. The average measurement was taken from the cardinal point relevant to the direction of the proposed works. This level of survey is deemed sufficient by the Arboriculturist in order to establish the extent of the crown spread in the direction of the proposals. All crown spread measurements should be taken from the tree survey schedules.

The trees were assessed in line with the Visual Tree Assessment (VTA) method as developed by Mattheck and Breloer (1994). This method is based on the axiom of uniform stress, whereby a tree will grow in response to environmental stimuli to produce a structure that bears forces evenly across its surface. As such an internal defect, such as decay, would initiate a noticeable change in the stem's shape to accommodate the physical change.

.

2.4. Survey

The locations of the surveyed trees were indicated on the detailed topographical survey drawing supplied.

The majority of trees surveyed were displaying numbered tree tags, and these numbers have been used for the survey. Where trees were not tagged, the trees have been sequentially numbered from 0001 for individual trees, G001 for groups of trees and H001 for the hedgerows.

2.5. Limitations to Survey

Trees were identified and inspected from ground level only and were not climbed. No invasive examination techniques (such as increment boring, or internal decay detection) were carried out and as such no assessment of the internal condition of the wood of these trees can be given. The tree survey undertaken is not intended to be a tree risk management survey targeting safety-related issues. However, where specific hazards have been identified these have been recorded and management recommendations provided.

BS 5837: 2012 does not include arguments for or against development, or for the removal or retention of trees. Where development is to occur the standard provides guidance on how to decide which trees are appropriate for retention.

Topographical survey data were used to plot the locations of the trees.

The report does not comment on possible effects of trees on neighbouring properties, including in relation to subsidence or heave, or with regard to possible hazards presented by trees surveyed. Neighbouring owners of trees that are identified as posing a possible risk to the property/site in question should seek their own advice as to possible effects of the recommendations given within this report.

Damage to, or possibility of damage to, any other structure that is not referred to within the report is not considered unless otherwise specified. This includes both neighbouring structures and any other structure on the property.

Trees are living organisms subject to changes outside man’s control. Trees and their environment alter with the seasons and it is as well to inspect trees whilst in full leaf and when out of leaf. Following harsh or unexpected weather conditions, or heavy storms it is also prudent to inspect trees. Changes to ground water conditions will affect the root growth of a tree. Such changes are not always the result of man’s influence and other factors may be involved.

3. Existing Site Conditions

3.1. Existing Land Use

Victoria Tower Gardens are located in central London, directly south of the Palace of Westminster. The site is bounded on the west side by a busy street, Millbank, which becomes Abingdon Street near the northern end of the Gardens, and on the east side by the River Thames. The Gardens are protected against the changing level of the river by a stone wall embankment, which ordinarily flows at a level well below that of the Gardens.

There are a number of pedestrian access points to the Gardens off the road to the west and, at the south end, near the roundabout on the western side of Lambeth Bridge. The boundary here is defined by iron railing fencing and a hedge. The site is a popular leisure venue, used equally by people taking advantage of the open green space, benches, play area, toilets and refreshment kiosk, and by walkers and runners passing through while following a riverside route. Most activity is concentrated along the riverside on the eastern edge of the site.

A Parliamentary Education Centre, opened in 2015, attracts visitors, including school groups, to the northern end of the site.

3.2. Existing Tree Stock

The Gardens are framed and dominated by the mature plane trees that line the two long sides of the site. Individually imposing, these have a high collective value: as a prominent example of London's most characteristic tree species; in defining the boundary of the Gardens and providing the varied benefits of trees in an urban environment, including shelter and shade. Beyond the immediate context of the park, their location directly south of the Palace of Westminster means that they are among the more photographed trees of the world, being especially prominent when viewed from the opposite bank of the river.

Although large in scale, the high crowns of the plane trees do little to screen the site, sound and associated pollutants of the traffic on the adjoining streets. A holly hedge of varying height, but typically 1500mm, runs along the boundary on the street side, but is not sufficiently substantial to do a thorough screening function.

The old age of these trees and their large size means their root zones are considerable in radial spread with surface root activity recorded adjacent to the majority of these trees through the displacement of the adjoining asphalt surfaces up to approximately 3m from the bases of the trees.

This direct damage being a result of incremental tree root growth from the large diameter buttress roots and opportunistic tree roots actively seeking supplies of water or favourable conditions. In this case it appears that the presence of underground drainage and condensation from the underside of adjoining asphalt surfaces are the main sources of water encouraging tree root spread. As such any designs to improve or remove any hard-surfaces opposite or surrounding these trees will require sympathetic design solutions in order to limit any damage to the underlying tree roots.

Other trees within the Gardens are smaller individual standard specimens of lesser quality (mostly cherry). A number of young ornamental trees are growing in the shrub beds at the northern end of the site, some planted in association with the 2015 Parliamentary Education Centre.

The one other tree of note at the site is a Lucombe Oak planted by the Queen on the occasion of her Silver Jubilee in 1977. This promising tree occupies a central location at the northern end of the site, and is marked by a commemorative plaque.

Beyond the boundary of the Gardens, sixteen trees of two species (plane and manna ash) situated on the western kerbside of Millbank are also recorded. These trees are of variable age and size. The crowns are typically high and of modest size due to the pruning that has been carried out to enable the passage of double decker buses and other tall vehicles and to avoid contact with the tall buildings adjacent on the west side.

The bases of the surveyed trees are accessible to users of the site, and the majority are within falling distance of publicly accessible areas. As such any works will have to ensure adequate protection of retained trees.

3.3. Soil Assessment

No soil assessment was carried out on site by the Arboriculturists although baseline data from the British Geological Survey webpage (http://www.bgs.ac.uk) states that the bedrock geology of the site is 'London Clay Formation - Clay and Silt', with varied superficial deposits including some clay content. The presence of clay-based soils means that they may be susceptible to volumetric changes through the uptake and release of water from tree roots. Any new foundations to accommodate any designs will have to take this into account.

3.4. Statutory Protection

Atkins have made enquiries to Westminster City Council to confirm the presence of any Tree Preservation Orders applicable to the site, but this information has not been supplied at the time of this report. Once a response has been received Atkins will make sure this information is passed onto the appropriate people. It is highly likely that many trees at the survey site are protected by TPOs, and this should be verified before any works that may affect trees are undertaken.

It should also be noted that the site is situated within the Westminster Abbey and Parliament Square conservation area, as such the trees are still afforded statutory protection under The Town and Country Planning (Tree Preservation) (England) Regulations 2012.

4. Summary of Tree Condition

4.1. Number of Trees Recorded

The survey captured in total 79no individual trees, 1no group and 2no hedgerows within the site.

4.2. General Condition Details

The survey sheets in Appendix B provide more detail on all the trees surveyed at the site. The trees are illustrated on Tree Constraints Plan drawing number 5152854-ATK-BHM-ARB001.

The mature plane trees at the site appeared to be in good condition and displaying good vitality. The younger trees at the northern end of the site were generally of less high quality, and some had structural or physiological defects. Occasional recommendations have been made for tree works as part of the preliminary management recommendations, but no tree was identified as requiring urgent remedial action.

All of the mature plane trees within the Gardens (50 in total) and one of the planes trees on Millbank were recorded as 'Category A' trees in accordance with the British Standard 5837:2012 categorisation system. This means that they are "high quality" trees with an estimated remaining life expectancy of at least 40 years. In the majority of cases the trees have been subjected to lifting of the crown to create more space and light beneath the trees; the crowns have also been reduced in size and/or thinned. Most pruning wounds have occluded successfully (i.e. the tree had put on reaction wood to cover the wound), but some have not. The roots of many trees have caused cracking and swelling of the tarmac and other hard surfacing adjacent to the trees. One tree (number 018) was observed as shedding much of its bark on the lower part of the stem, but this was not thought to be symptomatic of a significant problem and this tree should be subjected to a programme of monitoring during periods of bud formation and leaf cover to ascertain any loss in vitality.

It should be noted that the presence of Massaria (*Splanchnonema platani*), a fungal pathogen that increases the risk of branches falling from the tree when under drought stress, was not observed. However, a detailed condition assessment was not undertaken by the arboriculturist.

Several trees surveyed were recorded as 'Category C' trees - "low quality" trees with an estimated remaining life expectancy of at least 10 years. Many of these were young or small ornamental trees, some of them grouped together as G001; several were cherries. The young holly hedge along the western fence line was also placed in Category C. While many trees were placed in this category on account of their young age, others had minor structural defects such as co-dominant stems, rubbing and crossing branches, or unbalanced crowns due to suppression by larger neighbouring trees.

The smaller street trees on Millbank were typically placed in this category due to their modest age and/or size; the latter due in part to reduction of the trees' crowns on account of their proximity to the adjacent buildings and passing tall vehicles. All of the trees on Millbank were growing in 'structural' soil with a high stone/sand content, in small rectangles amid the pavement slabs and kerbstones.

A number of trees were recorded as British Standard 'Category B' trees. This means that they are "moderate quality" trees with an estimated remaining life expectancy of at least 20

years. As well as some of the more established street trees on Millbank, these include a Lucombe Oak planted by the Queen in 1977 to commemorate her Silver Jubilee (a YouTube video shows Her Majesty planting the tree: https://youtu.be/92d7-6vF-xI). Although too young to merit a Category A rating purely on tree quality grounds, this is a young tree of promise with high cultural significance due to its royal connection, the removal of which in the context of any proposed development should not be considered lightly. The potential to translocate the tree within the Gardens through the use of a tree spade could be explored. However, this course of action should be considered only as a last resort and if essential to accommodate the winning design.

It is appropriate to note that the collection of trees in Victoria Tower Gardens is heavily dependent on one species, London Plane, which makes it vulnerable to attack by a disease that might target this particular species. The fungal disease *Ceratocystis platani* (CSP) has caused the widespread loss of plane trees throughout parts of Europe including Italy and southern France. At the time of this survey the disease has not reached the UK, and the Category A rating does not allow for the possibility of the trees succumbing suddenly to a disease of this kind. Until such time as this happens, the plane tree collection in Victoria Tower Gardens should be cherished; however, it is recommended that any new planting of trees within the garden avoid London Plane and increase the diversity of species at the site.

5. Arboricultural Impacts

5.1. General

This survey takes into account the tree stock deemed likely to be affected by the proposed scheme and identifies their condition and suitability for retention. The Tree Constraints Plan (drawing number 5152854-ATK-ARB0001) illustrates the extents of the survey area, the root protection area (RPA) for each tree or group of trees and their crown spreads.

The British Standard relies heavily on the creation of a protected zone referred to as the RPA around each tree. This is the minimum area around a tree deemed to contain sufficient roots and rooting volume to maintain the tree's viability, and where the protection of the roots and soil structure is treated as a priority. This area should be protected from disturbance "in order to avoid unacceptable damage to the tree as a result of severance or asphyxiation of the root system." The recommended minimum area (m^2) for each tree to avoid potentially harmful disturbance has been calculated for all of the trees on site and entered into the tree schedule and is illustrated on the tree survey drawings. In some cases the RPAs for the larger groups of trees have been illustrated as an offset from the outer canopies in order to establish a suitable area for protection.

The RPA for each tree is illustrated as a circle centred on the base of the stem or as an offset from the outer canopy edges of larger groups. This area does not take into account pre-existing site conditions or other factors that can influence or modify the shape and disposition of tree roots. Accordingly, the Arboriculturist can make modifications or judgements on the likely extents of RPAs, where through professional judgement it is deemed likely that the root zones have been restricted in a certain direction because of limiting factors such as topography, drainage or the presence of existing built infrastructure.

5.2. Scheme details

The design proposals for the holocaust memorial are not yet known, and so the impacts of proposed works cannot be accurately quantified at this stage. This report and accompanying TPP should be used by the designers to limit the impact of the proposals on the tree stock, and following detailed design this report updated to reflect the full impacts on the trees.

5.3. Arboricultural Impacts

The impacts of the proposals have not been evaluated at this time. The designers should seek to retain trees where possible within the site extents using sympathetic layouts and observing the RPAs illustrated on the TPP. In general terms the BS category C trees should not hinder the development as they are low-quality specimens, either due to their young age or to structural or physiological health issues that may limit their useful remaining life expectancy below 10 years. The designers should seek to retain the moderate and high quality trees, the British Standard category B and A specimens respectively.

Trees will tolerate a degree of root zone infringement depending on the works proposed and if they require any excavations, similarly, other factors to consider are species tolerance and the remaining un-surfaced RPA that can be retained. The BS5837 makes reference to 20% as a general rule in determining the amount of RPA infringement that could be achievable. The designers or contractors should use this information to inform the extent of the proposals including works areas and consider reducing or re-aligning these areas where possible to retain trees.

The designers or contractors should use the produced TPP to place any construction-related activities outside of the soft surfaces within the RPAs of the trees on site. This is to preserve the soil structure within these areas from compaction and the detrimental effects this will have on the underlying root systems of these trees.

5.4. Preliminary Management Recommendations

The preliminary management recommendations are covered in detail within the tree survey schedules.

5.5. Preliminary Mitigation Measures

No preliminary mitigation measures have been identified at this time.

Appendix A. Key & BS5837:2012 Survey Table

Tree No: Sequential reference number given to the tree or group of trees as shown on the tree survey drawings.

Species: This is the common name given to the tree. The botanical name is sometimes given.

Height (Ht): tree height from the base of the tree to its full stem height, measured in metres (m). Measurements are taken to the nearest half metre.

Stem diameter (mm): measured in accordance with figure A1 below. Measurements are rounded to the nearest 10mm.

Branch spread (m): measurement of crown spread to the four cardinal points; if the crown is balanced a single measurement is given. Crown spread plotted on the tree survey drawings. Measurements are taken to the nearest half metre.

1st significant branch and direction of growth (m): measurement of the height of the first significant branch above ground level, given in metres and direction of growth e.g. 2.4-N

Canopy height (m): height of the canopy above ground level. Measurements are taken to the nearest half metre.

Life stage: The following abbreviations are used:
Y = Young trees <1/5 life expectancy.
SM = Semi-Mature trees 1/5 – 2/5 life expectancy.
EM = Early Mature trees 2/5 – 3/5 life expectancy.
M = Mature trees 3/5 – 4/5 life expectancy
OM= Over-Mature trees >4/5 life expectancy

Vitality: Good, fair, poor or dead
Good – a tree with little or no obvious physiological defects; leaf density and colour is typical for the species, bud, flower and fruit production are good and there are no signs of dieback at any point throughout the crown.

Fair – a tree with moderate physiological defects; leaf density is less than typical for the species, leaf cover is chlorotic, bud, flower or fruit production are deficient, there are signs of minor dieback within the crown, there is a moderate degree of deadwood within the crown.

Poor – a tree with major or multiple physiological defects; evidence of extensive crown thinning, bud, flower or fruit production is poor or missing, there are signs of advanced dieback throughout the crown, there is extensive or major deadwood throughout the crown.

Dead – a tree that has died due to either old age, drought, disease, pest infestation, physical damage to the main stem or rooting system, or a combination of these factors.

General observations, particularly of structural and/or physiological condition: e.g. observations of any decay and physical defect.

Preliminary management recommendations: any identified preliminary management to rectify defects recorded in general observations. These may include the need for further detailed inspection, or works to address immediate hazard to life or property.

Estimated remaining contribution, in years:
<10
10+

20+
40+

Category grading: As per BS5837:2012 chart in accordance with figure A2 below.
A – Illustrated as light green (RGB code 000-255-000)
B – Illustrated as mid blue (RGB code 000-000-255)
C – Illustrated as grey (RGB code 091-091-091)
U – Illustrated as dark red (RGB code 127-000-000)

Root Protection Area (m²): plotted around each of the category A, B and C trees on relevant drawings, illustrating the minimum area around a tree deemed to contain sufficient roots and rooting volume to maintain the tree's viability. The protection of the roots and soil structure is treated as of paramount importance.

(Note: Red hash tag '#' will denote that a measurement is estimated)

Figure A1 – Measurement of tree stems dependant on tree form:

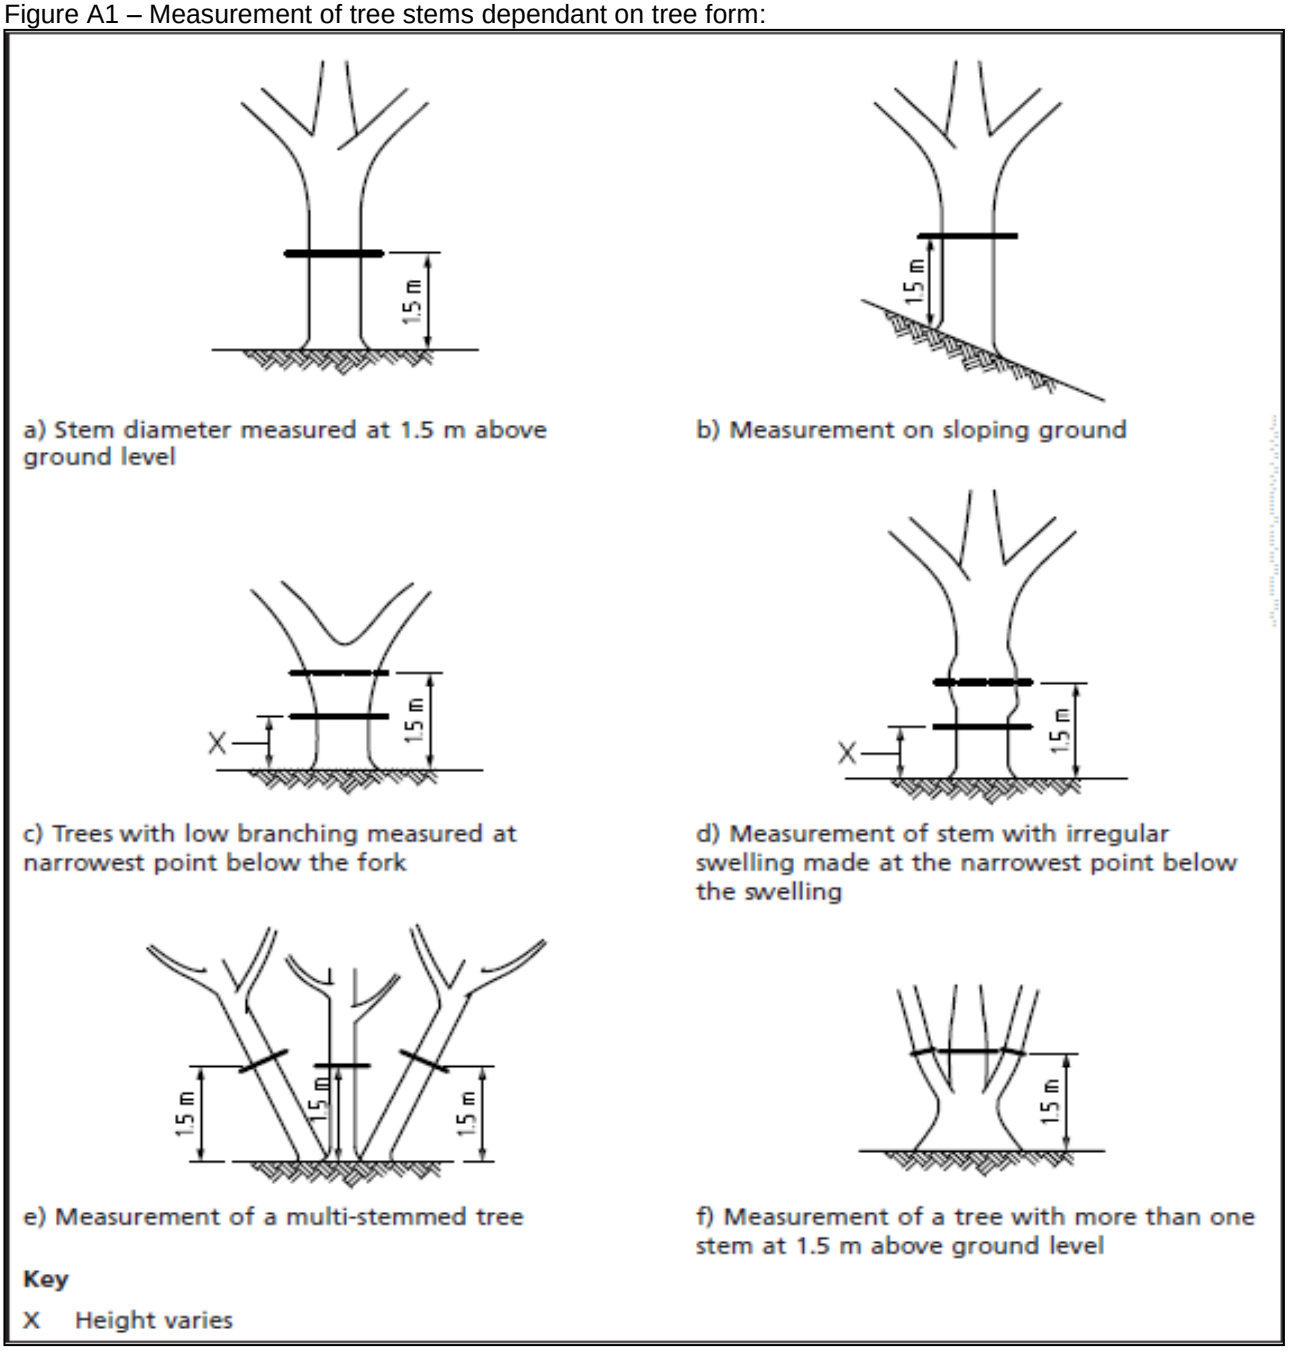

Figure A2 – Cascade chart for tree quality assessment from BS5837:2012

Category and definition	Criteria (including subcategories where appropriate)		
Trees unsuitable for retention (see Note)			
Category U Those in such a condition that they cannot realistically be retained as living trees in the context of the current land use for longer than 10 years	• Trees that have a serious, irremediable, structural defect, such that their early loss is expected due to collapse, including those that will become unviable after removal of other category U trees (e.g. where, for whatever reason, the loss of companion shelter cannot be mitigated by pruning) • Trees that are dead or are showing signs of significant, immediate, and irreversible overall decline • Trees infected with pathogens of significance to the health and/or safety of other trees nearby, or very low quality trees suppressing adjacent trees of better quality *NOTE Category U trees can have existing or potential conservation value which it might be desirable to preserve; see **4.5.7**.*		
	1 Mainly arboricultural qualities	**2 Mainly landscape qualities**	**3 Mainly cultural values, including conservation**
Trees to be considered for retention			
Category A **Trees of high quality** with an estimated remaining life expectancy of at least 40 years	Trees that are particularly good examples of their species, especially if rare or unusual; or those that are essential components of groups or formal or semi-formal arboricultural features (e.g. the dominant and/or principal trees within an avenue)	Trees, groups or woodlands of particular visual importance as arboricultural and/or landscape features	Trees, groups or woodlands of significant conservation, historical, commemorative or other value (e.g. veteran trees or wood-pasture)
Category B **Trees of moderate quality** with an estimated remaining life expectancy of at least 20 years	Trees that might be included in category A, but are downgraded because of impaired condition (e.g. presence of significant though remediable defects, including unsympathetic past management and storm damage), such that they are unlikely to be suitable for retention for beyond 40 years; or trees lacking the special quality necessary to merit the category A designation	Trees present in numbers, usually growing as groups or woodlands, such that they attract a higher collective rating than they might as individuals; or trees occurring as collectives but situated so as to make little visual contribution to the wider locality	Trees with material conservation or other cultural value
Category C **Trees of low quality** with an estimated remaining life expectancy of at least 10 years, or young trees with a stem diameter below 150 mm	Unremarkable trees of very limited merit or such impaired condition that they do not qualify in higher categories	Trees present in groups or woodlands, but without this conferring on them significantly greater collective landscape value; and/or trees offering low or only temporary/transient landscape benefits	Trees with no material conservation or other cultural value

Appendix B. Tree Survey Schedules

Tree No	Species in Group	Ht (m)	Stem diameter (mm)	Branch spread (m) N E S W	1st major branch height (m) & Direction N/E/S/W	Canopy height (m)	Life stage Y SM EM M OM	Vitality Good Fair Poor Dead	General observations Structural and/or physiological condition	Preliminary management recommendations	Est'd Remaining contribution (years) <10/10+/20+/ 40+	Category grading A B C U 1/2/3	Root Protection Area Radius (m)
001	Wild Cherry	7	180	3.7, S-2	2.2-E	2	SM	Fair	Growing within planted border. Crown lifted to 2m with occluded & unoccluded pruning wounds present. Tree No	Species in Group	Ht (m)	Stem diameter (mm)	Branch spread (m) N E S W	1st major branch height (m) & Direction N/E/S/W	Canopy height (m)	Life stage Y SM EM M OM	Vitality Good Fair Poor Dead	General observations Structural and/or physiological condition	Preliminary management recommendations	Est'd Remaining contribution (years) <10/10+/20+/ 40+	Category grading A B C U 1/2/3	Root Protection Area Radius (m)
70013	London Plane	30	1570	N-11.3, E-12.9, S-9.9, W-7#	4-SE	6	M	Good	Existing hard surface footpath 2.5m east. Potential for surface root activity displacing adjacent surface with mounding of asphalt surface, potential to repair cracks. Large stem girth, oldest tree in group. Crown lifted, thinned & reduced in past with occluded & unoccluded pruning wounds present. Abrupt angles on some reduced branches, not significant at present	No works presently required	40+	A2	18.8
71014	London Plane	33	1020	N-7, E-11.9, S-8.5, W-10#	7-E	7	M	Good	Existing hard surface footpath 2.5m east, potential for surface root activity displacing surface up to 3m from base with mounding of asphalt surface. Crown lifted, thinned & reduced in past with occluded & unoccluded pruning wounds present. Abrupt angles on some reduced branches. Not significant at present.	No works presently required	40+	A2	12.2
71015	London Plane	33	940	N-7.7, E-11.9, S-9.4, W-10#	8-E	7	M	Good	Existing hard surface footpath 2.5m east, & concrete slab for seating area approx. 1.8m. Potential for surface root activity displacing edging stones. Crown lifted, thinned & reduced in past. Occluded & unoccluded pruning wounds present. Abrupt angles on some reduced branches. Not significant at present	No works presently required	40+	A2	11.3

Tree No	Species in Group	Ht (m)	Stem diameter (mm)	Branch spread (m) N E S W	1st major branch height (m) & Direction N/E/S/W	Canopy height (m)	Life stage Y SM EM M OM	Vitality Good Fair Poor Dead	General observations Structural and/or physiological condition	Preliminary management recommendations	Est'd Remaining contribution (years) <10/10+/20+/ 40+	Category grading A B C U 1/2/3	Root Protection Area Radius (m)
71016	London Plane	26	890	N-9.2, E-11.7, S-9.4, W-10#	3-NE	6	M	Good	Existing hard surface footpath 2.5m east, potential for surface root activity displacing surface up to 6m from base. Mounding of asphalt surface, few surface cracks visible. Crown break at 3m, with pronounced north east & south west scaffold branches. Branches previously overextending with large diameter pruning wounds at tips from reductions. Crown lifted, thinned & reduced in past with large diameter pruning wounds present throughout crown. South branch supporting 2xbranches from adjacent tree, points of abrasion potential for weakened limb, overhangs footpath	Reduce south branch by approx. 3m	40+	A2	10.7

Tree No	Species in Group	Ht (m)	Stem diameter (mm)	Branch spread (m) N E S W	1st major branch height (m) & Direction N/E/S/W	Canopy height (m)	Life stage Y SM EM M OM	Vitality Good Fair Poor Dead	General observations Structural and/or physiological condition	Preliminary management recommendations	Est'd Remaining contribution (years) <10/10+/20+/ 40+	Category grading A B C U 1/2/3	Root Protection Area Radius (m)
71017	London Plane	28	1090	N-10.6, E-10.9, S-6.5, W-7#	7-E	6	M	Good	Existing hard surface footpath 2.5m east, potential for surface root activity displacing surface up to 3m from base with mounding of asphalt surface. Patching present, potentially remedial measures from surface root activity. Co-dominant stems from 4m, union appears sound. Large diameter pruning wounds present, particularly to east where scaffold branch has been removed. Crown lifted, thinned & reduced in past. Occluded & unoccluded pruning wounds present. Abrupt angles on some reduced branches. Not significant at present. North east scaffold branch rubbing on branch from adjacent tree, another branch also resting on top of contact point. Potential for weakened branch at abrasion point, overhangs footpath	Reduce 2xnorth east branches that are in contact with each other and adjacent tree. Reduce in extent by to 5m to appropriate branch union	40+	A2	13.1

Tree No	Species in Group	Ht (m)	Stem diameter (mm)	Branch spread (m) N E S W	1st major branch height (m) & Direction N/E/S/W	Canopy height (m)	Life stage Y SM EM M OM	Vitality Good Fair Poor Dead	General observations Structural and/or physiological condition	Preliminary management recommendations	Est'd Remaining contribution (years) <10/10+/20+/ 40+	Category grading A B C U 1/2/3	Root Protection Area Radius (m)
71018	London Plane	32	1060	N-9.8, E-12.6, S-8.8, W-10#	4-E	5	M	Good	Existing hard surface footpath 2.2m east, potential for surface root activity displacing surface up to 3m from base, mounding of asphalt surface. Patching present covering cracks. Pronounced south east scaffold branch, previously overextending reduced by approx. 3m. Abrupt angle at pruning wound. Not significant at present. Crown lifted, thinned & reduced in past, occluded & unoccluded pruning wounds present, decay pockets at some unoccluded pruning wounds, not significant at present	No works presently required	40+	A2	12.7
71019	London Plane	30	900	N-9.3, E-12.5, S-8.0, W-11#	5-E	5	M	Good	Existing hard surface footpath 2.2m east, potential for surface root activity displacing surface up to 3m from base. Mounding of asphalt surface and lifting of edging stones. Pronounced north & east scaffold branches. Curved ends from pruning & crown suppression. Crown lifted, thinned & reduced in past, abrupt angles on some reduced branches, not significant at present	No works presently required	40+	A2	10.8

Tree No	Species in Group	Ht (m)	Stem diameter (mm)	Branch spread (m) N E S W	1st major branch height (m) & Direction N/E/S/W	Canopy height (m)	Life stage Y SM EM M OM	Vitality Good Fair Poor Dead	General observations Structural and/or physiological condition	Preliminary management recommendations	Est'd Remaining contribution (years) <10/10+/20+/ 40+	Category grading A B C U 1/2/3	Root Protection Area Radius (m)
71020	London Plane	33	1040	N-10.6, E-12.2, S-9.0, W-9#	5.5-N	6	M	Good	Existing hard surface footpath 2.2m east, potential for surface root activity displacing surface up to 3m from base. Mounding of asphalt, patching present so no visible cracks. Formerly tri-stemmed from 7m, south stem pollarded, now 5xstems. Unions appear sound. Crown lifted, thinned & reduced in past. Abrupt angles on some reduced branches, not significant at present	No works presently required	40+	A2	12.5
71021	London Plane	33	930	N-8.9, E-11.0, S-9.0,W-12#	7-E	6	M	Good	Existing hard surface footpath 2.2m east, potential for surface root activity displacing surface up to 3.2m from base. Mounding of surface with cracks. Not significant at present. Single leader. Crown lifted, thinned & reduced in past. Occluded & unoccluded pruning wounds present throughout crown. Abrupt angles on some reduced branches, not significant at present	No works presently required	40+	A2	11.2

Tree No	Species in Group	Ht (m)	Stem diameter (mm)	Branch spread (m) N E S W	1st major branch height (m) & Direction N/E/S/W	Canopy height (m)	Life stage Y SM EM M OM	Vitality Good Fair Poor Dead	General observations Structural and/or physiological condition	Preliminary management recommendations	Est'd Remaining contribution (years) <10/10+/20+/ 40+	Category grading A B C U 1/2/3	Root Protection Area Radius (m)
71022	London Plane	30	970	N-8.3, E-12.6, S-7.5 ,W-12#	4-NE	5	M	Good	Existing hard surface footpath 2.7m east. No direct damage recorded from surface root activity. Crown break at 4m, pronounced north-east & south east scaffold branches. Large diameters, previously overextending, branches reduced by approx. 3m. Abrupt angles at pruning wounds. Unoccluded pruning wounds present throughout crown. Occasional stubs of dead wood at pruning wounds. Not significant at present. Crown thinned & reduced in past.	No works presently required	40+	A2	11.6
71023	London Plane	33	1120	N-12.4, E-12.0, S-8.0 ,W-10#	8-E	8	M	Good	Existing cafe kiosk and outdoor hard surface seating area 1.2m east of tree. No direct damage recorded from surface root activity. Crown lifted to 8m. Past reduction and thinning operations also evident in crown with occluded & unoccluded pruning wounds present. Abrupt angles on some reduced branches. Not significant at present	No works presently required	40+	A2	13.4

Tree No	Species in Group	Ht (m)	Stem diameter (mm)	Branch spread (m) N E S W	1st major branch height (m) & Direction N/E/S/W	Canopy height (m)	Life stage Y SM EM M OM	Vitality Good Fair Poor Dead	General observations Structural and/or physiological condition	Preliminary management recommendations	Est'd Remaining contribution (years) <10/10+/20+/ 40+	Category grading A B C U 1/2/3	Root Protection Area Radius (m)
71024	London Plane	33	1130	N-6.2, E-12.0, S-9.8 ,W-9#	7-E	5	M	Good	Existing playground 2.8m east, no direct damage recorded from surface root activity. Crown lifted, thinned & reduced in past. Occluded & unoccluded pruning wounds present. Abrupt angles on branches which have been reduced, not significant at present.	No works presently required	40+	A2	13.6
71025	London Plane	32	880	N-6.3, E-10.4, S-9.8 ,W-8#	5-E	5	M	Good	Existing playground 2.3m to east. No direct damage recorded from surface root activity. Wood panel retaining wall, Approx. 250mm height. Crown lifted, thinned and reduced in past. Occluded & unoccluded pruning wounds present. Abrupt angles on some branches where they have been reduced, not significant at present.	No works presently required	40+	A2	10.6
71026	London Plane	30	1080	N-8.0, E-12.8, S-12.2 , W-10#	3-NE	5	M	Good	Crown break at 3m. Crown lifted & reduced in places for highway clearance. Occluded and unoccluded pruning points present. Abrupt angles at some branch unions. Not significant at present. No direct damage recorded from surface root activity. Existing playground 4m east.	No works presently required	40+	A2	13.0

Tree No	Species in Group	Ht (m)	Stem diameter (mm)	Branch spread (m) N E S W	1st major branch height (m) & Direction N/E/S/W	Canopy height (m)	Life stage Y SM EM M OM	Vitality Good Fair Poor Dead	General observations Structural and/or physiological condition	Preliminary management recommendations	Est'd Remaining contribution (years) <10/10+/20+/ 40+	Category grading A B C U 1/2/3	Root Protection Area Radius (m)
G001	Cherry, apple, ginkgo, robinia	to 6	to 100	2	var.	var.	Y-M	Good to poor	Growing in large mounded plant bed, mixed ornamental group of specimens at different life stages, all small; recently planted trees triple-staked; includes small apple, almost dead, and tree growing as coppice from sawn stump	No works presently required	10+	C2	1.2
H001	Holly	1.5	n/a	0.75	0	0	EM	good	Running along length of park boundary on western road side, continuous hedge beneath plane trees, interrupted only by access points, managed at height of railings (1500mm); continuous mixed border of shrubs and herbaceous plants on park side, including cotinus, bamboo, eucalyptus, sarcococca, skimmia, fatsia, mahonia, euonymus, garrya, hamamelis, choisya, callicarpa, cotoneaster, ruscus aculeatus.	No works presently required	10+	C2	n/a
H002	Pyracantha, hawthorn, beech	2	n/a	.5	0	0	Y	Good	Two separate hedges running almost parallel 4m apart: pyracantha at 1100mm spacings, each secured to its own 1200mm high fan trellis on south wall of parliamentary education centre building, gravel path at base; hawthorn/hornbeam hedge growing in plant bed, planted in single row at 300mm spacings, height pruned at 1800mm	No works presently required	10+	C2	n/a

Appendix C. Glossary of Terms

Term	Description
Access Facilitation Pruning	One-off tree pruning operation, the nature and effects of which are without significant adverse impact on tree physiology or amenity value, which is directly necessary to provide access for operations on site.
Adaptive Growth	The process whereby wood formation is influenced both in quantity and in quality by the action of gravitational force and mechanical stresses on the cambial zone
Amenity Value	The environmental and landscape benefits of trees as opposed to their commercial value for timber
Ancient Woodland	Sites which have been wooded since at least 1600, as defined by English Nature and recognised as being of high nature conservation value, whether managed or not. They may be semi-natural or replanted.
Arboricultural Method Statement	Methodology for the implementation of any aspect of development that is within the root protection area, or has the potential to result in loss of or damage to a tree to be retained.
Arboriculture	The study and care of trees and other woody vegetation
Arboriculturist	A person who has, through relevant education, training and experience, gained expertise in the field of trees in relation to construction.
Cavity	An open wound, characterised by the presence of decay and resulting in a hollow
Co-dominant stems	Where a tree's main stem splits into two leaders, can also be called twin-stemmed.
Competent person	A person who has training and experience relevant to the matter being addressed and an understanding of the requirements of the particular task being approached.
Construction	Site-based operations with the potential to affect existing trees.
Construction Exclusion Zone	The area based on the root protection area to which access is prohibited for the duration of a project.
Coppice	A traditional method of woodland management in which young tree stems are repeatedly cut down to near ground level. In subsequent growth years, many new shoots will emerge, and, after a number of years the coppiced tree, or *stool*, is ready to be harvested, and the cycle begins again
Crown clearance	This is the removal of all dead, dying and diseased branches; in addition branches that are cleared away from a specific hazard e.g. live railway line.

Term	Description
Crown lifting	The removal of lower branches to provide a desired amount of clearance above ground level. This can be achieved either by the complete removal of a branch or only parts of which extend below the desired height
Crown reduction	The overall reduction of both the height and spread of the crown.
Decay	Process of degradation of woody tissues by fungi and bacteria through decomposition of cellulose and lignin.
Deadwood	Deadwood is often present within the crown or on the stems of trees. In some instances it may be an indication of ill health; however, it may also indicate natural growth processes. If a target is present beneath the tree, and falling deadwood may cause injury or damage it should be removed; if no target is present the deadwood may be retained intact for conservation purposes (insects, fungi, birds etc.).
Epicormic growth	A secondary growth from dormant adventitious buds on the stem or main braches.
Failure	In connection with tree hazards, a partial or total fracture within woody tissue or loss of cohesion between roots and soil.
Hazard beam	A branch that has over-extended in which strong internal stresses may occur without the compensatory formation of extra wood (longitudinal splitting may occur in some cases).
Hung-up limb	Dead or fallen branch from within the crown or from another tree's crown that has failed and been caught up by, and resting on, branches of a tree
Included Bark Junction	Pattern of development at branch junctions where bark is turned inward rather than pushed out. Potential weakness due to a lack of a woody union.
Ivy Growth	Ivy growth may ascend into the tree's crown, increasing wind resistance, concealing potential defects and reducing the tree's photosynthetic capacity. Ivy growth is often acceptable in woodland areas as a conservation benefit.
Monolith	A large bulk of standing dead wood. Usually the trunk of the tree or the trunk with the base of the branch frame work. These should be retained for wildlife habitat when the risk is appropriate for the location.
Pollarding	This involves the removal of whole branches to leave only the main trunk. In species such as willows and poplars such significant pruning is acceptable with new branches developing from the pollard heads. Secondary pruning of the new wood can help form a new canopy to the tree several years after the initial pollard
Reaction Wood	Specialised secondary xylem, which develops in response to a lean or similar mechanical stress, attempting to restore the stem to the vertical.

Term	Description
Root Protection Area (RPA)	The layout design tool indicating the minimum area around a tree deemed to contain sufficient roots and rooting volume to maintain the tree's viability, and where the protection of the roots and soil structure is treated as a priority.
Service	Any above or below ground structure or apparatus required for utility provision.
Stem	The principal above-ground structural component(s) of a tree that supports its branches.
Structure	A manufactured object, such as a building, carriageway, path, wall, service run, and built or excavated earthwork.
Structural Defect	Internal or external points of weakness, which reduce the stability of the tree
Sub-dominant stem	A branch within the crown that is not the dominant leader
Suppressed	Trees which are dominated by surrounding vegetation and whose crown development is restricted from above.
TPO	A Tree Preservation Order is an order made by a Local Planning Authority which in general makes it an offence to cut down, lop, top, uproot, wilfully damage or wilfully destroy a tree without first getting permission. Tree Preservation Orders are usually made to protect trees that make a significant contribution to the amenity of an area. They may particularly be made when it is felt that a tree may be under threat.
Tree Constraints Plan	Abbreviated to TCP. Plans showing specific tree constraints including Root Protection Areas and Crown spread.
Tree Protection Plan	Abbreviated to TPP. Scaled drawing, informed by descriptive text where necessary, based upon the finalised proposals, showing trees for retention and illustrating the tree and landscape protection measures.
Visual Tree Assessment	A non-invasive method of examining the health and structural condition of trees. Developed by Claus Mattheck and David Brelor 1994
Wound	Any injury, which induces a compartmentalisation response
Wound Wood	Wood with atypical anatomical features, formed in the vicinity of a wound and a term to describe the occluding tissues around a wound as opposed to the ambiguous term "callus."
