Health and Wellbeing Strategy for Westminster

2017-2022
We are proud to share with you our Health and Wellbeing Strategy for Westminster. This is a strategy for everybody who lives in, works in and visits Westminster. It sets out how people, public services, businesses and voluntary and community groups will all play their part in creating a city in which everyone has access to the best opportunities to be healthy and well.

Westminster’s health and care system faces significant challenges but we can be confident in the energy, talent and support of the city’s people, public services and partners to tackle those head on. The Westminster Health and Wellbeing Board is determined to provide the leadership to harness those qualities and drive real improvements to people’s lives. We will improve outcomes for children and young people. We will reduce the risk factors for, and improve the management of, long term conditions. Together, we will improve mental health through prevention and self management.

The strategy is underpinned by a delivery plan at both a city and a sub-regional level (in collaboration with the North West London Alliance of local authorities and clinical commissioning groups) which will be published in the spring. They commit us all to delivering our shared priorities by working together across the health and care system and council services and with people and voluntary and community groups.

We are thankful to all those who attended our consultation events, submitted consultation responses online and fed back directly to us. This strategy is the result of genuine collaboration across the city and we pledge to continue to listen to your views. This is a living document and it will continue to evolve over the next five years to adapt to the changing needs of the city. We will review the strategy every year and we will involve you in this process.

Our city is the vibrant and diverse heart of London and its continued success depends on the wellbeing of its people. This strategy invites us all to play a role in achieving our shared goals of delivering genuine improvements to people’s lives and contributing to a city that we can all be proud of.
EXECUTIVE SUMMARY

This strategy represents the commitment of health and care organisations, voluntary and community groups, businesses and people to fulfil our shared vision for our city in which all people are enabled to be well, stay well and live well, supported by a collaborative and cohesive health and care system.

We will work together to prevent mental and physical ill health by intervening as early as possible and tackling the wider challenges to wellbeing around employment, housing, education, community resilience, safety and the environment. However, people who suffer short or long term health conditions or live with disabilities requiring support will receive high quality, co-ordinated and timely treatment and care that is centred on their needs and preferences so they can live healthier and independent lives.

Westminster experiences unique challenges due to its central location and being a hub for businesses, culture, tourism, transport and higher education. We also have an ageing population, a high prevalence of childhood obesity and some long term conditions, such as dementia. However, we are fortunate to have diverse communities with a wealth of experience and talent, and univalled assets including our vibrant voluntary and community sector, our cultural heritage and our location in a world-class city to help us tackle our challenges.

Over the next five years, we will focus on the following four priorities:

1. Improving outcomes for children and young people
   We will work together to make sure children and young people have the best start in life from point of conception and are supported throughout childhood by intervening as early as possible or bringing together individuals, their families and carers to support them to live healthy and active lives. We will ensure that opportunities for physical activity and volunteering are available and communicated to children and young people and enable front line workers to provide advice (where appropriate) and effectively signpost them to local services and opportunities.

2. Reducing the risk factors for, and improving the management of, long term conditions such as dementia
   We will support and enable people to live healthy and independent lives by addressing the risk factors that can lead to developing or aggravating long term conditions. We will empower people by ensuring that they can access information, support them to manage their conditions, facilitate their access to employment opportunities, address wider environmental issues (such as housing, air quality and transport) and ensure the availability of optimal medical treatment. We will equip front line staff to effectively signpost people to and make people aware of the opportunities for improving mental and physical health and wellbeing. We will ensure that high quality care and support is provided to individuals and carers when needed.

3. Improving mental health through prevention and self management
   We will empower people to look after their mental health by ensuring they are able to access information, care and support to maintain their wellbeing. We will work together with people, their families and carers, communities and front line workers to spot early signs of illness and, where possible, prevent crises. The continuing stigma associated with mental health will be tackled and we will ensure that when people seek help both their mental and physical health needs are addressed.

4. Creating and leading a sustainable and effective local health and care system
   We will work together to provide strong local leadership to effectively deliver this strategy. Between the many organisations, health and care professionals and people in Westminster, we will collaborate to achieve our shared vision for a healthy and well city. This will involve equipping our workforce with the skills to provide the care our population needs; making sure that our buildings are modernised and accessible to all; and improving our access to patient information and data so that we can provide more personalised care for people.

This strategy focuses on the most complex and critical needs identified by, and for, our communities, where we can all take action rapidly and effectively over the next five years to transform the wellbeing and quality of life of people who live in, work in and visit Westminster. We welcome your input and active participation in the delivery of these aims.

Health and wellbeing is everyone’s business, working in partnership with you.

INTRODUCTION

Our local health and care system is delivered by Westminster City Council, Central and West London Clinical Commissioning Groups, health and care providers, voluntary and community sector organisations, communities and individuals. It is a system with many different functions but one purpose: to support and enable us all to live well, be well and stay well.

Our local health and care system is facing some of the greatest challenges it has ever faced. Complex pressures include a growing population (a small but increasing proportion of which is older, frail and living alone), rising numbers of people with long term conditions and changing expectations of the public about how and when they access care and support. Looking to the future, we know that these trends will only continue. Doing nothing is not an option.

This strategy represents a commitment to prioritising prevention and early intervention. It will influence the commissioning and delivery of services and the Health and Wellbeing Board will continue to advise, inform and challenge decisions made about health and care in the city.

When anyone in our communities experiences mental or physical ill health, or is living with a physical or learning disability, they require support. Partners will come together to deliver high quality care in a setting that is appropriate and convenient for patients and service users.

The NHS Five Year Forward View signalled a national shift in attitude towards supporting prevention in health and care, and called for partners to work together to experiment with new models of care. The devolution agreement for London further encourages us to prepare for potentially greater flexibilities, powers and responsibilities in the future.

The North West London Sustainability and Transformation Plan (STP) will bring the NHS Five Year Forward View to life and set out the vision for health and care of Clinical Commissioning Groups and local authorities including Westminster. This strategy will be our local plan setting out how we will meet our commitments in the North West London STP, while delivering local priorities for the population of Westminster.

Organisations alone can only do so much. Our most significant and most valuable assets to achieve the mission of this strategy are not buildings or budgets – it is the coming together of talented, knowledgeable and passionate people, health and care staff and local voluntary and community groups. Working with them to design local services is crucial to achieving the aims of this strategy and making sure that they are meeting local needs.

It is important that everyone who comes into contact with our health and care system is treated with dignity and respect, particularly our vulnerable populations. For our large homeless and rough sleeping population, providing services that address their needs and proactively engages and empowers them to make choices to enable them to be healthy and well is important. We will do all we can to ensure everyone in Westminster has fair access to health and care services to support and improve their health and wellbeing.

This strategy focuses on four targeted priorities which are based on local needs and what we have heard from partners, local groups, communities and people. They are:

1. Improving outcomes for children and young people
2. Reducing the risk factors for, and improving the management of, long term conditions such as dementia
3. Improving mental health through prevention and self management
4. Creating and leading a sustainable and effective local health and care system.

We will deliver our priorities by addressing quality of life, people’s experiences of services and the financial sustainability of our health and care system. Outcomes for each priority set out our aspirations for the health and wellbeing of people in Westminster. We will develop a detailed implementation plan that will identify how we will put our commitments into action. The delivery of the plan will be overseen by the Health and Wellbeing Board as the leader of the city’s health and care system bringing together the council, the two Clinical Commissioning Groups, voluntary and community groups and Healthwatch.

Our four priorities will be the focus for the Westminster Health and Wellbeing Board for the next five years. However, this does not mean that other issues and challenges are not important or will not be addressed during this time. The strategy puts a spotlight on the most complex and critical needs identified in Westminster so that we can work together to deliver high quality care in a setting that is appropriate and convenient for patients and service users.

Health and wellbeing is everyone’s business, working in partnership with you.
OUR COMMUNITIES

Westminster is a global city at the heart of the nation’s capital and home to a highly diverse resident population of 242,299 people1. We have the highest level of international migration of any place in England, with over half of our resident population born outside the UK. The population during the daytime is approximately one million people which is the highest daytime population of any London borough. There are also tens of thousands of people who live in the city for short periods or on a part-time basis. The Westminster population is more changeable than any other area3.

Our resident population features a high proportion of younger people, with 49% aged between 18 and 44 years old4. Black, Asian, Arab and other minority ethnic groups comprise 30% of our population and there are estimated to be over 10,000 lesbian, gay, bisexual or transgender (LGBT) people in the city. Almost half of households are single person households, the third highest proportion in London. We have the fourth highest proportion of households in the country that are occupied by lone pensioners with 40% of people aged over 65 living alone5. We also have the highest level of rough sleepers of anywhere in the country with over 2,570 people being identified as sleeping rough in 201415.

Looking at likely demographic, economic and social trends over the next 15 years, we estimate that the following changes will affect how people live and work in Westminster and in turn their health and wellbeing needs:

- There will be a 16% increase in the number of people aged over 85 years16 living in Westminster. While a large proportion of this group will age in good health, there will be a significant rise in the number of older people living with long term conditions that will cause both minor and severe impacts on their mobility, health and care needs, and wider role in their communities. Over the next five years alone, we expect the annual cost of care for all older people living in the city (approximately 2,400 people) with severe physical disabilities and long term conditions such as dementia to grow by £10.4m to £102m. This is equal to the projected cost of treating all healthy adults aged 18-64 (approximately 137,500 people).
- There will be a smaller proportion of children and young people living in Westminster by 2036. The proportion of people under 16 years old is expected to decline from 16% to 14%17.
- If nothing changes, more young people will be growing up with long term health conditions, particularly obesity and mental health related conditions, that will likely follow them into adulthood. This could have a significant impact on their ability to make the most of the opportunities of a changing social, economic and technological landscape11.
- The city will be busier than ever as more commuters coming to work in Westminster every day, putting tremendous stress only 17 years longer than the least deprived. For women this gap is near 10 years. Additionally, the most deprived 20% of the population are likely to begin experiencing long terms of over 10 years earlier than the least deprived. This is because health is not just related to the services people can access but also to the wider factors which can influence a person’s health and wellbeing, such as housing, education, employment and the environment.

Westminster has much to celebrate and be proud of. However, we have challenges that we must tackle in partnership with everyone in the city.

We will do all we can to ensure that the built environment enables people to make choices that support their health and wellbeing. This includes ensuring that housing is appropriate for different needs and life stages. We will work with schools and other educational establishments to support children and young people and families to be well and stay well through education and enabling them to make healthy choices and ensuring they are able to undertake regular physical activity.

Through Westminster’s Greener City Action Plan15, we will tackle poor air quality and develop a sustainable transport system which delivers health and wellbeing benefits, reduces pollution while keeping the city moving. We will do this, in part, through promoting walking and cycling as alternative modes of transport and making the public realm safer and accessible for all. The socioeconomic and environmental factors that can affect health and wellbeing cannot be tackled alone through public sector interventions. It requires businesses and communities to play their part to, for example, improve air quality, support and look out for those who are vulnerable in our communities.

Our large business and visitor populations are significant parts of the local, regional and national economy. However, these groups also put pressure on the environment. Services are often funded on the basis of resident population numbers and so do not reflect the realities of Westminster where the population increases each day from 242,000 residents to over a million people. Westminster has a high level of population churn as people enter and leave the city rapidly. Every year over 20,000 people leave and approximately the same number of new people move in17. This high level of population turnover can make it more difficult for people to find and access services and for services to deliver the best outcomes.

Demand for housing is high19. The majority of people live in rented accommodation, both private and social housing15. People living in rented accommodation can be more exposed to changes in housing costs and the potential for long term tenancy and poverty than people who own their own homes.

Westminster has the highest recorded population of rough sleepers of any local authority in the country. This population has higher rates of physical and mental health problems compared to the general population20, and are at higher risk of developing complicated alcohol and/or drug dependency21. Rough sleepers attend accident and emergency approximately seven times more often than the general population, and are also more likely to experience admissions and prolonged hospital stays22. However, Westminster also has a wealth of knowledge and expertise in supporting and housing homeless people and rough sleepers. We aim to build on this expertise and deliver better health and wellbeing outcomes for those individuals and groups who are in need, or do not have, access to stable and appropriate accommodation.

OUR CHALLENGES

The vitality of Westminster is part of its appeal, but this can sometimes be a challenging landscape in which to help people to be well and stay well.
OUR VISION AND GOALS

Overall vision: all people in Westminster are enabled to be well, stay well and live well, supported by a collaborative and cohesive health and care system.

Mission: to focus on prevention and early intervention. When people experience mental or physical ill health we will come together to ensure timely, high quality, person-centered care which is delivered with dignity and respect at all stages, including at the end of life.

Building on the principles set out in the Marmot Review (2010) and the long term goals, set out in our previous joint health and wellbeing strategy, Healthier City, Healthier Lives (2013) for 2013-2028, we will be focusing on the following four priorities over the next five years:

Strategic Priorities (2017-2022)

- Improving outcomes for children and young people
- Reducing the risk factors for, and improving the management of, long term conditions such as dementia
- Improving mental health through prevention and self management
- Creating and leading a sustainable and effective local health and care system.

Long Term Goals (2013-2028)

Improving the environment in which children and young people live, learn, work and play

Helping more people to live healthily for longer and fewer die prematurely

To help create a safe, supportive and sustainable city in which all are empowered to play as full a role as possible

People living with injury, disability, long term conditions, and their carers have a good quality of life and remain independent for longer.

These priorities will steer and challenge the way we deliver local health care to address and deliver better outcomes for our population. Instead of focusing on how to cure ill health and poor wellbeing, we are taking a strategic approach to move our collective energy and assets to focus on prevention, early intervention and keeping people healthy.

For each priority we will aim to deliver improvements in:

- Quality of life
- Quality of care
- Financial sustainability for health care
- Professional experience
- Operational performance and collaboration of services.

OUR OUTCOMES

We have framed the outcomes from the perspective of individuals so people can see our aspirations for their health and wellbeing is clear and focused. The following overarching outcomes and expectations are common for all themes:

- I have access to appropriate and timely information required to make the right decisions and choices for my health and wellbeing
- I am aware of the services, spaces and facilities available and accessible to me, my carer and my family to maintain or improve health and wellbeing
- There is no wrong door for when I need care and support
- When I am experiencing mental or physical ill health, the services and support I receive are high quality, joined up and delivered in an appropriate setting
- All my needs are viewed holistically, both mental and physical
- I can access care and support that is tailored according to my needs and preferences, including in the community and crisis support
- I am treated with sensitivity, dignity and respect.
PRIORITY 1 - IMPROVING OUTCOMES FOR CHILDREN AND YOUNG PEOPLE

PRIORITY VISION
All children and young people live healthy active lives and are supported into healthy active adults who contribute to society and share their positive learning and experiences with their families, friends and neighborhoods.

THE IMPORTANCE OF FOCUSING ON CHILDREN AND YOUNG PEOPLE
Children in Westminster are on average more likely to be overweight, have poor dental health, and experience poor mental health than their peers in the rest of London and the country. This means that they are also more likely to transition to, and continue through, adulthood in poor health, and less able to take full advantage of the economic and social opportunities of living and learning in the city.

OUR APPROACH
This strategy will seek to address the mental and physical health and wellbeing of all children and young people in Westminster. We want the services they interact with to support and treat them and their families as capable of making decisions about their lives, health and care.

We will work with and support children and young people and their families, to ensure that they have a safe and healthy childhood from conception to adulthood. We want to ensure that every child and young person, including those who are living with long term physical or mental health conditions and those with learning or physical disabilities, is equipped with the skills and connections needed to remain healthy, well and active.

Working with families from the stage of conception is crucial. We want to work with families right from the start to establish and develop healthy foundations for children and young people. This includes maternity advice and support, and early help family services which engage with and enable parents to improve and maintain their wellbeing and form positive relationships with their children. We will also continue to raise awareness of universal and preventative services which children, young people and their families can benefit from.

Evidence in Westminster shows that child poverty, which is a large determinant of the health and wellbeing of children and young people, is directly related to the ability of parents to enter and maintain employment. We will build on the North West London Like Minded Strategy and the improvements of the Children and Family Act 2014 for children and young people with special educational needs (SEN) and disabilities. They both recognise the role of wider determinants in the mental and physical health and wellbeing of children and young people. We value the role of schools and communities in supporting prevention and early intervention in mental health for children and young people. We will also work with schools and families to ensure that the professionals who children and young people interact with are equipped with the knowledge and information to refer them to the right support at the right time. There is a continued need for local collaboration and joint working to address the wider determinants of health for children and young people, and families, such as housing and education including supporting students with SEN.

We want to prevent children and young people from becoming ill wherever possible. However, if they do experience poor or declining mental and physical health or require support with their disabilities we want them and their families to be able to access appropriate and reliable information, advice and expert care in ways that are convenient and tailored to them. Children and young people will have a diverse range of experiences and attitudes to accessing information and support and care, and we will work with them to develop new or improve existing channels of information.
IMPROVING THE OUTCOMES FOR CHILDREN AND YOUNG PEOPLE

We know that being active is important for the physical and mental health of children and young people, and their families. There are links between increased physical activity and reductions in depression and anxiety for some children and young people. Regular physical activity is also important for self-esteem and has been shown to improve academic performance. Studies show a strong link between poor mental health and sedentary behaviour.

We will make sure that the range of physical activity opportunities that can be enjoyed either in or out of schools are communicated to children, young people, their families and schools. We will also address barriers, real or perceived that some children, young people and their families might face to accessing physical activities including cost, transport or availability of supportive play spaces such as streets, parks, open and green spaces, and other community facilities. We want to encourage children and young people to engage in physical activity every day by enabling them to find a type of physical activity they enjoy.

We will continue to encourage and enable children and young people, and families to use our range of community assets and nationally renowned cultural institutions to maximise their physical and mental health and wellbeing. These include our museums, libraries, leisure centres and facilities based in estates where they can gain some free access to activities.

OUR COMMITMENTS

To ensure that all children and young people are given the best start in life and supported to grow into healthy and well adults we commit to:

- making sure that the emotional wellbeing and mental health of children and young people is supported by accessible and joined up local services
- promoting activities and opportunities for physical activity, sporting and cultural experiences for children and young people and their families to enjoy
- engaging with prospective, new and current families to provide information and signposting, and identify early opportunities to provide targeted support where needed
- ensuring front line workers (e.g. health visitors, GPs, housing and children’s services staff) are working together to support families to access advice, employment, education and training opportunities
- promoting opportunities for families to support each other and learn about their children’s health and wellbeing
- empowering children and young people to monitor and find sources of support to improve and maintain their own health and wellbeing
- supporting, encouraging and rewarding children and young people who volunteer and engage in civic activities through the Spice Time Credit* schemes and other programmes
- involving children and young people in the co-design of mental and physical health services to ensure that they are relevant, convenient, acceptable and accessible for them.

PRIORITY 2 - REDUCING THE RISK FACTORS FOR, AND IMPROVING THE MANAGEMENT OF, LONG-TERM CONDITIONS, SUCH AS DEMENTIA

PRIORITY VISION

People remain healthy, well and independent for as long as possible. The likelihood of developing long term conditions is reduced, through the management of risk factors such as poor diet and insufficient physical activity. People, carers, families, communities and professionals work together to ensure that people living with long term conditions, and their families and carers, receive high quality and timely health and care, and other public services to improve their quality of life. When nearing the end of life, people, their families and carers are supported to plan for care which is dignified and honours their personal preferences.

THE IMPORTANCE OF TACKLING LONG TERM CONDITIONS

People over 65 years with long term conditions are more likely to experience additional, complex and long term conditions which will significantly impact on quality of life, and restrict economic and social participation. Long term conditions, such as dementia, diabetes and cardiovascular diseases, are often linked to the quality and appropriateness of housing, social isolation, lifestyle (including behaviours such as alcohol or substance misuse), diet and physical activity, either as risk or aggravating factors for long term conditions.

Long term conditions both mental and physical are expected to become more prevalent and their cost to the health system increase, particularly for adults over 65. Nationally, people with long term conditions account for approximately 50% of all GP appointments, 64% of all outpatient appointments and 70% of all inpatient beds. Treatment for people with long term conditions is expected to cost £7 in every £10 of health and care spend.

The likelihood of developing long term conditions is reduced, through the management of risk factors such as poor diet and insufficient physical activity. People, carers, families, communities and professionals work together to ensure that people living with long term conditions, and their families and carers, receive high quality and timely health and care, and other public services to improve their quality of life. When nearing the end of life, people, their families and carers are supported to plan for care which is dignified and honours their personal preferences.

OUR APPROACH

We will aim to:
1. reduce the risk factors associated with long term conditions
2. reduce the risks of developing complications from long term conditions
3. improve care and support, and ultimately, outcomes for people with long term conditions.

We want to, where possible, prevent long term conditions for all ages by intervening early to reduce risk factors through awareness raising, facilitating and encouraging behaviour change and providing proactive support where possible. We will also work with people to support attendance at medical appointments, prescriptions and maximise the take up of preventative services, such as Health Checks and engagement with Health Trainers.

Some long term conditions themselves can often lead to the development of further long term and complex conditions, for example people with diabetes often develop high blood pressure as a result. Evidence tells us that those who experience mental health conditions and those living in areas of deprivation are more likely to suffer multiple, long term and complex conditions. This affirms our belief that we need to do more to reduce the risk factors that can also aggravate long term conditions.

Participating in and maintaining appropriate levels of physical activity and a balanced diet are significant parts of preventing and mitigating long term conditions. We will work with communities and partners to maintain and promote physical activity opportunities for all adults in Westminster, whether they live in, work in or visit the city. In parallel, we will work with partners to continue to improve our infrastructure, including transport, urban environment, housing, to create a supportive environment for good health and wellbeing.

Safe and secure housing supports people to lead healthy and fulfilled lives. Conversely, unstable, poor or inaccessible housing can have a detrimental effect on health and wellbeing and can lead to the development or aggravation of long term conditions. We will continue to tackle poor living conditions in both social and private accommodation in Westminster.

Westminster has a high number of homeless households and the highest population of rough sleepers in the country, many of which include people with complex and multiple mental and physical long term conditions.

Evidence shows that 42% of people who sleep rough in Westminster have one or more support needs, including alcohol and drug dependency, and mental health conditions.

Rough sleeping is a unique challenge for Westminster’s health and care system, one which we can best understand and address through collaboration with partners. Actively contributing to local communities can help make some people feel engaged and invested in the place where they live, work or learn. It can also help to prevent and alleviate short and long term mental and physical conditions as well as build community pride and resilience. We will ensure that there are a range of employment, adult education and volunteering opportunities for people with long term conditions to take advantage of.

We know that some people with long term mental or physical conditions and disabilities may experience barriers to engaging with their neighbours and local communities or accessing local facilities such as libraries due to mobility issues or low confidence. We will ensure that people who experience barriers are made aware of the range of support to help with access available to them.

Westminster has one or more support needs, including alcohol and drug dependency, and mental health conditions

We will ensure that people who experience barriers are made aware of the range of support to help with access available to them.
Dementia is an umbrella term used to describe symptoms resulting from diseases and conditions that affect the brain. There are many types of dementia but the most common include Alzheimer’s disease and vascular dementia. Regardless of type, dementia can have significant effects on the lives of those who experience it, their carers, families, friends and communities. Dementia can reduce life expectancy for sufferers - someone diagnosed between ages 70-79 loses on average 5.5 years of life.

People with dementia are over three times more likely to die during their first admission to hospital for an acute medical condition. Westminster has a high rate of emergency and inpatient admissions for people with dementia, accounting for a quarter of acute hospital beds. People with dementia are also likely to have significant physical and mental illness, such as depression, congestive heart failure and Parkinson’s disease. Four out of the five most common illnesses for which dementia sufferers are admitted to hospital are preventable, such as broken/fractured hips and bladder and chest infections.

Westminster has a rapidly ageing population. The 2015 Joint Strategic Needs Assessment on Dementia predicted that diagnoses of long term conditions associated with ageing, such as dementia and Alzheimer’s, will see an increase of 56% between 2013 and 2033. As of 2015 we have a diagnosed population of 1,904 people. Over 2,400 people in the city will have dementia by 2030. This trend will continue beyond 2030 with over 760 new expected cases of dementia in the city each year.

There are a number of risk factors for vascular dementia. These are largely factors that result in poor cardiovascular health, such as unhealthy weight, low levels of physical activity and smoking. Improving overall physical health can have an impact on reducing the likelihood of developing vascular dementia and improving quality of life. A study linked improved healthy lifestyles to a 20% decrease in the predicted incidence of vascular dementia amongst men over 65.

OUR COMMITMENTS

Where people are suffering from ill health, we will act early to tackle risk and aggravating factors and make sure that they receive the best care and support that is tailored to their needs. We will:

- Support working age adults to develop and/or retain active lifestyles and mitigate those risk factors that contribute to the development of long term conditions
- Create the conditions for dementia friendly communities, where an understanding of dementia supports communities to value the contributions of people experiencing the condition and their carers
- Consider the experiences and needs of people with long term conditions and their carers by working with them to developing services
- Support community resilience by ensuring that local services take into account the diversity of experience and background of people with long term conditions and their carers
- Support and encourage retired people to volunteer and contribute their knowledge and expertise to Westminster through the Spice Time Credits scheme, which incentivises and rewards participants for community activity
- Support the development of a health and care workforce that is agile and responsive to patient and community needs. This will include creating teams of professionals who can work across specialisms and signpost people to our community assets and facilities which can support people to improve their health and wellbeing.

PRIORITY 3 - IMPROVING MENTAL HEALTH OUTCOMES THROUGH PREVENTION AND SELF-MANAGEMENT

PRIORITY VISION
People are able to maintain good mental health and wellbeing. Those with short or long term mental health conditions receive timely and effective support to manage and reduce the impact of their condition, and they are treated with dignity and respect.

THE IMPORTANCE OF TACKLING POOR MENTAL HEALTH
We all have the potential to experience poor mental health during our lifetime but stigma remains around discussing and seeking treatment for mental health conditions. Nearly half of all ill health for under 65s is related to mental illness and one in six people in the UK experienced a common mental health problem in the past week. Poor mental health can affect our ability to maintain relationships, employment and housing as well as quality of life and life expectancy. Mental wellbeing can be impacted by a range of factors – genetics, deprivation, employment or family stress, social isolation and education.

There are some groups of people who are at a higher risk of experiencing poor mental health. People who sleep rough, are homeless or live in unsuitable homes are particularly affected. Those on or low incomes or living with deprivation are also more likely to experience severe mental health conditions and related poor physical health conditions.

OUR APPROACH
Most people with common mental health conditions (such as anxiety and depression) have the capacity to manage their own health with timely access to information and support. Low level support such as talking therapies can help people to develop the skills to monitor and manage their mental health independently. We will improve access to information and signposting to support for common mental health issues, including community and peer support.

Improving the quality of life and life expectancy for people with severe and enduring mental health conditions requires us to treat and support them as whole individuals, which means looking at the wider issues that may affect them. This includes their housing, employment, relationships, diet, physical activity, and risk behaviours, such as smoking and alcohol consumption. People with severe mental health conditions often receive poorer acknowledgement and treatment of their physical health conditions. Similarly, people with long term physical conditions often receive poorer treatment of their mental health. We must ensure that as a health and care system, we are joining up mental and physical health treatment and treating people as individuals.

People with severe mental health conditions often come into contact with multiple public services. For example, staff in education, police and fire services, housing and probation often encounter people with severe mental health conditions in the course of their work. It is important that there is an awareness of mental health issues across public service commissioners, providers and staff to ensure that we can refer and support each other to provide the most effective interventions.

Compared to neighbouring areas, Westminster has more people receiving mental health social care services. However, there is evidence that support for Westminster carers of people with severe and enduring mental health conditions is lower than in neighbouring boroughs, with fewer carers receiving assessments. We will work to ensure that everyone is aware of their entitlements and the availability of services and facilities that are there to support them.

We are not only focused on delivering services, but also on ensuring that these services are effectively supporting and enabling everyone experiencing a mental health condition to lead active and fulfilling lives. By looking at mental health within a wider context and recognising the complex interaction of factors such as relationships, housing, education, and lifestyle, we will improve health and wellbeing and reduce the stigma associated with poor mental health.
HOW WE WILL IMPROVE MENTAL HEALTH OUTCOMES

The Westminster Health and Wellbeing Board has endorsed and supports the implementation of LikeMinded®45, a sub-regional strategy spanning eight boroughs and their corresponding CCGs in North West London. The delivery of the LikeMinded strategy depends on partnership working to deliver high quality and joined up mental health services to improve the quality of life for individuals, families and communities. The Westminster Health and Wellbeing Board is not seeking to replicate the work on mental health that has been set out in LikeMinded. The Board will instead focus on, and supplement, the ambitions embodied in LikeMinded including:

- We will improve wellbeing and resilience and prevent mental health needs where possible by:
  - supporting people in the workplace
  - giving children and young people the skills to cope with different situations
  - reducing loneliness for older people.

The Board, in its local leadership role, will use its collective influence and energy to accelerate delivery of this ambition in Westminster through prioritising and embedding prevention, early intervention and a partnership approach to stop and reverse the negative trends of poor mental health.

MENTAL HEALTH AND EMPLOYMENT

Unemployment is a known cause for poor mental health in Westminster, and poor mental health can in itself be a barrier to employment and meaningful occupation (such as volunteering). Stress and mental health disorders are among the biggest causes of long term absence from work and are increasingly reasons for short term absence in employment[16]. We will work to champion a range of opportunities, from volunteering to part time and full time work that are welcoming and supportive to people with mental health conditions. We will also work with employers to embed positive mental health messages and activities to alleviate work related stress and build coping techniques.

OUR COMMITMENTS

Working with individuals, communities, professionals and employers in Westminster we will improve mental health for Westminster people by:

- addressing the stigma associated with all types of mental health conditions
- treating and caring for people as individuals and recognising the complex factors that impact mental health
- recognising and addressing the wider determinants of mental health, including housing, employment, education and community interactions
- ensuring that statutory, voluntary and community organisations continue to work closely together to identify people early who might require support

- supporting people in the workplace and tackling barriers into work
- working with communities to develop peer support, resilience and cohesion so that individuals, families and neighbours can support and look out for each other
- providing information through a range of mediums that is tailored for people of all ages and situations to access and use.

LONELINESS AND ISOLATION

Positive social interactions are crucial to mental and physical health and wellbeing. Older adults tend to suffer more from long term and multiple conditions which can reduce mobility and limit social interaction. Sustained loneliness and lack of interaction with others can lead to poorer mental and physical health. We will work closer together with partners and communities to minimise loneliness and isolation.

2019 PopHealthPlan-19-2020-1-01

[16] Unemployment is a known cause for poor mental health in Westminster, and poor mental health can in itself be a barrier to employment and meaningful occupation (such as volunteering). Stress and mental health disorders are among the biggest causes of long term absence from work and are increasingly reasons for short term absence in employment. We will work to champion a range of opportunities, from volunteering to part time and full time work that are welcoming and supportive to people with mental health conditions. We will also work with employers to embed positive mental health messages and activities to alleviate work related stress and build coping techniques.

LONELINESS AND ISOLATION

Positive social interactions are crucial to mental and physical health and wellbeing. Older adults tend to suffer more from long term and multiple conditions which can reduce mobility and limit social interaction. Sustained loneliness and lack of interaction with others can lead to poorer mental and physical health. We will work closer together with partners and communities to minimise loneliness and isolation.

How we will improve Mental Health outcomes through prevention and self-management
PRIORITY

CREATING AND LEADING A SUSTAINABLE AND EFFECTIVE LOCAL HEALTH AND CARE SYSTEM FOR WESTMINSTER

PRIORITY VISION

We will be an integrated and collaborative health and care system using our collective resources (such as data, technology, estates and workforce) to deliver person centred information and care in the right place at the right time.

BACKGROUND

The health and care system has made significant improvements in patient care, experience and outcomes by joining up services and working together. But we could do more. People can often go to different places to receive care relating to single conditions, and medical records may not be transferred between health and care providers in a way that would support efficient and effective care. Patients are not able to direct budgets to support their personal choices for their treatment and care.

Westminster has a bold vision for health and care - we want to transform the wellbeing of people who live in, work in and visit Westminster and in parallel, support a clinically and financially sustainable model of health and care. This vision will require commitment from everyone in Westminster.

The Health and Wellbeing Board is already engaged in determining the way resources are directed and spent in health and care. The transformation of primary care, the bedrock of the current and future health and care system, is fundamentally important to achieving our aims.

To realise the Westminster vision we need to change the way we think about health and care locally and implement a shift in culture to move to a shared responsibility for health and wellbeing.

LEADERSHIP AND FINANCE

The London Health and Care devolution agreement sets out a vision of local people and their representatives taking greater control over decisions on matters that affect them.

One of our first tasks will be to put in place the leadership and governance arrangements necessary to make these important and strategic decisions in a robust, transparent and equitable way. We need to be able to share executive decision making across our organisations and position the Health and Wellbeing Board to continue to have the central coordinating and stewardship role on behalf of local people and communities.

To encourage integrated care, payment incentives and business planning cycles need to be aligned. There is an urgent need for changing the nature of tariffs for health care to enable greater investment in prevention. Commissioners also need to increase the use of pooled budgets as a way of enabling closer health and care collaboration. Using quality based incentive payments for providers across pathways of care would incentivise best practice models and partnership working, while ensuring that providers are encouraged to make a contribution to the health and wellbeing of the whole population.

Our implementation priorities:

- Delivering the priorities of this strategy;
- Putting in place the governance and accountability arrangements which will help us to deliver our strategy, building on Westminster’s strong history of joint working across health and care. A priority for us will be to involve local people as active contributors to the decision making process;
- Viewing our budgets and services “as one” in the same way as we have begun to view our priorities as common challenges. We will do this by modelling our spend and priorities over the lifetime of this strategy, setting out how much we anticipate we will spend over this period and on what. We will then need to consider how best we can incentivise our whole system to deliver on this by learning from best practice elsewhere.
WORKFORCE
The changing nature of needs and demands of our population means that we need to transform a workforce that has been trained to work on individual instances of ill health into one that is trained and equipped to work in integrated and multi-disciplinary teams in community settings to prevent and intervene before ill health occurs.

We need to invest in multi-skilled training of nurses and associated health professionals to deliver person-centred care in the community. There is a large and growing mismatch between the demand and expectations of care and the supply of health and care workers who will be able to deliver this, including a large undersupply of GPs.

We also need to review social and economic trends that might affect our workforce in the future, including the cost of living in central London. Improved connections into the city as a result of infrastructure projects, such as Crossrail, may mean more of our workforce will commute into Westminster. We need to work together to create the conditions that will ensure that Westminster remains an attractive and viable affordable place for health and care workers to live and work in.

Our early implementation priorities:
• Mapping our current workforce to understand gaps in our workforce now and in the future, as well as the skills required to meet changing needs. We have begun to map our future workforce demand as part of the Primary Care Modelling project undertaken by the Health and Wellbeing Board and we will use this tool alongside long term scenario planning (including looking at the potential impact of technology) to understand a range of potential future issues and develop solutions.
• Considering how to capitalise on new technologies and ways of working. Technology has the ability to place more power in the hands of patients to self manage their own conditions outside of hospital settings and telecare (remote consultations through mediums such as live interactions via computers and tablets) will enable greater remote monitoring of patients by specialists. Working with partners to redesign the training and development system to facilitate career progression and development of skills and qualifications in work. Working with Royal Colleges, Health Education England and other teaching institutions to refocus local health and care worker training programmes towards the workforce characteristics and practices needed for the future. This is likely to include more specialist skills in primary and community care, more generalist skills in hospital care and more collaboration across hospital and community and mental health and physical health workers. We need to change the training curriculum to develop the skills to care for people with multiple conditions that span physical and mental health.
• Providing the right reward structures and contract flexibility to incentivise the creation and retention of the right workforce, including in pressure areas such as caring and nursing staff. Greater flexibility that allows staff to work at a city wide and North West London level must be addressed to incentivise the supply of staff where demand is greatest.
• Recognising, supporting and harnessing the power of the informal workforce by creating a ‘social movement’ to support these in need, including a more strategic approach to the support and development of volunteers.
• Looking after the mental and physical health and wellbeing of our workforce which is just as important as that of the people for whom they deliver services. We will support and deliver programmes such as the Workplace Charter to support employers to improve the health and wellbeing of their staff.

ESTATES
People have changing needs and demands for how they want to access health and care services and our estates need to support people to access services in the community when they need to. We also need to address the rising cost of space in Westminster which means that models of care built around individual locations for specific services are unsustainable. Partners in Westminster need to work together to share space and develop the estates required to respond to the changing needs and demands of our population.

Our implementation priorities:
• Increasing the value of our estate in Westminster - better strategic management of our estate could realise multiple benefits including reducing and sharing fixed running costs, releasing land for housing for our workforce and reinvesting proceeds back into the local health and care system.
• Developing the estate required to facilitate new models of care and support - a new approach is needed that looks across the whole system and brings services together to improve access and experience for people as well as opportunities for provider innovation and collaboration. This includes, for example, multi-functional hubs that can provide a range of services in a community setting. A more flexible approach involving colocation of NHS and social care staff would make services more accessible and could release savings to be reinvested in patient care, staff and technology.

TECHNOLOGY AND INFORMATION
Investing in information technology and data analytics will be crucial to enabling a successfully integrated health and social care system in Westminster that provides everyone with a good experience of care. Ensuring that we work with people and partners to secure appropriate consent of people to use their data will be integral. We must work together to facilitate and enable information exchange between organisations in a way that respects people’s preferences for how they handle their information. Not doing so could hinder inter-organisational collaboration and innovation.

Our implementation priorities:
• All partners across Westminster must agree to share and pool information in a way that links data at an individual level and organise it into a format which enables better analysis, collaboration and decision making by all organisations. Sharing data also includes sharing with patients and carers to enable them to become more digitally empowered and support their self management.
• We must continue to use data and evidence to inform our service delivery decisions. This includes identifying residents and communities at risk of poor health so that we can plan effective and targeted interventions.
• Supporting the role of technology in enabling people to manage their own care. The extent to which a person has the skills, knowledge and confidence to manage their own health and care (“patient activation”) is a strong predictor of better health outcomes, reduced healthcare costs and satisfaction with services. As little as a 5% increase in self care could reduce the demand for professional care by 25%[1].
GLOSSARY

Early intervention – intervening as soon as possible to prevent health conditions becoming worse.

Enabling – putting people in charge so they can improve their own health.

Integration – bringing services together so that they are based around the needs of people.

Life skills – the abilities needed to cope with the challenges of everyday life.

Person-centred – care based on the needs of the person.

Prevention – preventing ill health or slowing existing health conditions becoming worse.

Primary care – the first point of contact when you are unwell. In Westminster this is usually a GP.

Quality of life – a person’s assessment of how good their life is.

Risk behaviour – types of behaviour that we know cause disease or ill health such as smoking.

Risk factor – the ways we behave or the places where we live, visit or work that are known to cause disease or ill health.

Whole system – the council, health organisations and voluntary and community sectors working together in Westminster to provide care and help people stay well.

Growth

Long-term conditions – a condition that cannot be cured but can be controlled by medication and other treatments.

No wrong door approach – people get the help they need no matter what organisation they get in contact with first.

Outcome – improvements to the health and wellbeing of a person/people.

Person-centred – care based on the needs of the person.

Populations – everyone who lives, works or visits Westminster.

This might include being an unhealthy weight or living in an area with bad air pollution.

Primary care – the first point of contact when you are unwell. In Westminster this is usually a GP.

Quality of life – a person’s assessment of how good their life is.

Risk behaviour – types of behaviour that we know cause disease or ill health such as smoking.

Risk factor – the ways we behave or the places where we live, visit or work that are known to cause disease or ill health.

Whole system – the council, health organisations and voluntary and community sectors working together in Westminster to provide care and help people stay well.
